SKILLS

Agentic Coding

Claude Code, custom MCP servers, LangGraph, OpenAI Agents SDK, agent verification/replay design, spec→acceptance-criteria decomposition

Frontend

React, Next.js, TypeScript, Vite, Tailwind, Socket.IO real-time UIs

Backend

NestJS, Django/DRF, FastAPI, Spring Boot, REST, gRPC, WebSockets, Celery

Languages

TypeScript, JavaScript, Python, Go, Java, C++, SQL

Architecture

Microservices, Hexagonal, CQRS, Event-Driven, Outbox, Idempotency, Multi-Tenancy, DDD

Data

PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, pgvector

Cloud & DevOps

AWS (EC2/RDS/S3/CodeBuild/CodeDeploy), Docker, Docker Swarm, Kubernetes, GitHub Actions, CI/CD

AI / LLM

OpenAI, Anthropic, Groq APIs, tool/function calling, RAG & embeddings, vision OCR, token-cost optimization

Auth & Payments

JWT, OAuth2/Google SSO, OTP-MFA, RBAC, Stripe, Plaid, Moov, TaxBandits

Testing & Ops

Vitest, pytest, ESLint boundary enforcement, Prometheus, Grafana, Loki, load testing

EDUCATION

B.Sc. in Computer Science

North Western University · Graduated 2025

ACHIEVEMENTS

- Meta Hacker Cup 2025 — Round 2 qualifier
- Published open-source packages on PyPI & npm

SUMMARY

Full-Stack Engineer and hands-on Agentic Coding practitioner who ships production software end-to-end — spec → agent → harness → verification → production. Uses Claude Code as a primary development environment, builds custom MCP servers to give coding agents reliable project context, and designed a dedicated AI-agent verification/replay harness (agentvcr) that catches divergence in real agent frameworks (LangGraph, OpenAI Agents SDK). Also built and launched multi-tenant SaaS platforms in Django and NestJS (600+ models, 350+ REST endpoints, ~1,000 req/min at <300ms p95), real-time apps over WebSockets/Socket.IO, and React/Vite tooling published on PyPI and npm. Meta Hacker Cup 2025 Round 2 qualifier.

AGENTIC CODING & AI-NATIVE ENGINEERING

- **Agent-directed development:** Daily agentic coding with Claude Code as primary dev environment — decomposing ambiguous requirements into agent-sized acceptance criteria and directing multi-step agent runs across React/Next.js, NestJS, and Django codebases.
- **Custom MCP servers:** Built servers exposing project-specific context (DB schemas, API contracts, internal tooling) to coding agents, cutting re-prompting and making agent behavior repeatable across tasks.
- **Verification harness (agentvcr):** Open-source "VCR" for AI agents — records/replays every LLM & tool call deterministically offline at zero token cost, with request-fingerprinting to flag nondeterministic fan-out instead of silently replaying wrong results.
- **Quality gates as code:** Shipped scriptable, exit-code-driven CLI (agentvcr diff) to wire agent-run verification directly into CI/CD as a merge/deploy gate.
- **Guardrails at scale:** CI-enforced architectural boundaries across 18 NestJS libraries, transactional outbox + idempotency for safe retries — the guardrails a coding-agent pipeline needs before code reaches production.

EXPERIENCE

Software Engineer · JumaTechs

2026 - Present

- Design and build scalable backend services and microservices powering production web applications; develop secure, well-documented REST APIs.
- Optimize PostgreSQL schema design/queries and introduce Redis caching & async task processing to boost throughput and reliability.

Software Engineer · Code Prophet

2024 - 2026

- Designed and delivered microservices focused on performance, scalability, and reliability; built REST APIs consumed by frontend apps and internal tooling.

SELECTED PROJECTS

agentvcr — Verification & Replay Harness for AI Agents

PyPI/npm · Python · FastAPI · SQLite · React/Vite

- Drop-in LLM proxy recording every LLM/tool call (OpenAI/Anthropic-compatible incl. Groq, Gemini, OpenRouter, Ollama, vLLM) with one base_url change; deterministic offline replay at zero token cost.
- Built React+Vite run-diff UI with mid-run editor and semantic differ (LCS alignment over step fingerprints) highlighting first-occurrence divergence.
- Positional-replay algorithm with fingerprinting (warn/strict/live-on-miss), validated against LangGraph & OpenAI Agents SDK; SQLite schema with header redaction for secrets.

GoStyle-Microservice — Multi-Tenant SaaS Platform (POS/Bookings)

NestJS 11 · PostgreSQL · Docker Swarm · gRPC

- 18 independently-versioned NestJS libraries via hexagonal architecture + CQRS, with eslint-plugin-boundaries enforcing dependency direction at CI time.
- 114-table PostgreSQL schema (116 migrations); transactional outbox + idempotent retries; ~392 Vitest tests; zero-downtime deploys with Grafana + Loki observability.

Balanzify — Multi-Tenant SaaS Accounting Platform

Django 5 · DRF · Celery · Django Channels · AWS

- 40+ Django apps, 600+ models, 350+ REST endpoints (invoicing, payroll, HRIS, inventory); multi-company tenancy with row-level isolation and RBAC.
- ASGI stack (Daphne) on AWS CodeBuild→CodeDeploy→EC2; ~1,000 req/min at <300ms p95; LLM transaction categorization + GPT-4 Vision/Tesseract OCR pipeline; Stripe, Plaid, Moov, TaxBandits.

Playzone — Real-Time Multiplayer Game Platform

Next.js · NestJS · Socket.IO · PostgreSQL

- Real-time multiplayer platform, no signup required; sub-second Socket.IO state sync with reconnect/turn handling; NestJS microservices for game logic & matchmaking.

Rhombus — Distributed Event Orchestration Platform

Go · Kafka · Redis · Elasticsearch

- Reliable data sync across PostgreSQL, Kafka, Redis, and Elasticsearch without distributed transactions via the Transactional Outbox Pattern.
