SUMMARY

Backend Engineer who builds production **Python / Django REST APIs** that stay correct under load, retries and multi-tenancy. Shipped a multi-tenant SaaS accounting platform on **Django, DRF, PostgreSQL, Redis and Celery** (350+ endpoints, 600+ models, real users) and open-source Python tooling on PyPI; owns the data model, migrations, API contract, background jobs and CI/CD for every feature.

EXPERIENCE

Software Engineer · JumaTechs 2026 – PRESENT

- Design and build scalable backend services and microservices for production web apps; ship secure, well-documented REST APIs with proper auth and permissions, consumed by web clients and internal systems.
- Optimise PostgreSQL schemas, queries and migrations, add Redis caching and asynchronous background jobs to lift response times and throughput; ship on schedule in a cross-functional Agile team.

Software Engineer · Code Prophet 2024 – 2026

- Designed and delivered microservices focused on performance, scalability and reliability; built and maintained REST APIs and backend services consumed by frontend apps and internal tooling.
- Partnered with frontend and product teams to turn requirements into robust, well-tested services and kept them healthy in production.

SELECTED PROJECTS

Balanzify · multi-tenant SaaS accounting platform [balanzify.com](#)
Django · DRF · PostgreSQL · Redis · Celery · Channels · Docker · AWS (EC2, RDS, S3, CodeDeploy)
Architected the Django backend for invoicing, payroll, HRIS, inventory and journals: **40+ Django apps, 600+ models, 350+ DRF endpoints** across end-user, workspace, admin and public API surfaces, with JWT auth, Google OAuth2 SSO, OTP/MFA, per-endpoint permissions and RBAC, row-level tenant isolation, audit logging, full model history and OpenAPI/Swagger docs.
Owned the PostgreSQL data model end to end — schema design, indexing, query optimisation and safe migrations on a live database; load-tested to **~1,000 req/min at <300 ms p95** and 500+ concurrent WebSocket connections on an async ASGI stack (Daphne) with PostgreSQL on RDS.
Celery + Redis workers for background jobs, reports and data tasks — receipt OCR (GPT-4 Vision + Tesseract), LLM transaction categorisation (OpenAI/Groq), financial reports over transactional data and outbound webhooks — keeping API latency low; real-time chat and notifications over Channels + Redis pub/sub.
Integrated third-party services — **Plaid, Stripe, Moov, TaxBandits** (IRS 940/941 e-filing); fully automated AWS CI/CD pipeline (CodeBuild → CodeDeploy → EC2) with Docker-based deployments.

GoStyle · multi-tenant SaaS platform for POS & bookings [business.gostyle.uk](#)
NestJS · TypeScript · PostgreSQL · Python gRPC · Docker Swarm · GitHub Actions · Grafana · Loki
Designed a **114-table PostgreSQL schema (116 migrations)** for POS/billing, FIFO inventory costing, bookings, RBAC and loyalty — money stored as integer fils to avoid floating-point drift, partial unique indexes for tenant-scoped constraints.
Microservices on hexagonal architecture + CQRS, packaged as 18 independently versioned libraries; **transactional outbox** for at-least-once events and encrypted per-tenant **idempotency** for safe retries; ~392 test files run against a real PostgreSQL container in CI, zero-downtime deploys, Grafana + Loki observability.

agentvcr · open-source “VCR” for AI agents [PyPI / npm · Apache-2.0](#)
Python · FastAPI · httpx · SQLite · React / Vite
Drop-in Python LLM proxy that records every LLM and tool call from any agent run (OpenAI/Anthropic-compatible: Groq, Gemini, OpenRouter, Ollama, vLLM) with one base_url change, then replays runs offline deterministically at zero token cost; request fingerprinting, run forking, a CI-friendly agentvcr diff CLI and header redaction so secrets never reach disk.

Rhombus · distributed event orchestration platform **OPEN SOURCE**
Go · Kafka · Redis · Elasticsearch · PostgreSQL
Reliable data synchronisation across PostgreSQL, Kafka, Redis and Elasticsearch **without distributed transactions** — Transactional Outbox pattern for atomic writes + event publication, eliminating drift between the database and downstream systems.

SKILLS

BACKEND
Python, Django, Django REST Framework, FastAPI, RESTful API design, auth & permissions, OpenAPI / Swagger, gRPC, WebSockets, NestJS, Spring Boot
DATABASES
PostgreSQL, MySQL, schema design, safe migrations, indexing & query optimisation, Redis, MongoDB, SQLite, Elasticsearch, pgvector
BACKGROUND JOBS & MESSAGING
Celery, Redis, Kafka, RabbitMQ, Redis pub/sub, Django Channels, transactional outbox, idempotency
LANGUAGES
Python, SQL, TypeScript, Go, Java, JavaScript, C++
ARCHITECTURE
Microservices, Hexagonal (Ports & Adapters), CQRS, Event-Driven, Multi-Tenancy, DDD, design patterns
DEVOPS & CLOUD
Docker, Docker Swarm, Kubemetes, AWS (EC2, RDS, S3, CodeBuild, CodeDeploy), Git, GitHub Actions, CI/CD, zero-downtime deploys
OBSERVABILITY & TESTING
Prometheus, Grafana, Loki, structured logging, SLI/SLO, load testing; pytest, Vitest, integration tests against real DBs
AUTH & INTEGRATIONS
JWT, OAuth2 / Google SSO, OTP-MFA, RBAC, Stripe, Plaid, Moov, TaxBandits, webhooks
AI / LLM
OpenAI, Anthropic, Groq APIs, tool calling, structured output, RAG, LangGraph, vision OCR

EDUCATION

B.Sc. in Computer Science
North Western University · Graduated 2025

ACHIEVEMENTS

- Meta Hacker Cup 2025** — qualified for Round 2
- Open-source packages** published on PyPI and npm

MORE OPEN SOURCE

- Playzone** — real-time multiplayer game platform; NestJS microservices with Socket.IO sub-second sync and PostgreSQL-backed state.
NestJS · Socket.IO · PostgreSQL
- University ERP** — academic system (students, results, payroll, HR records) on Spring Boot / PostgreSQL + React, deployed via CI/CD.
- Twinflow** — traffic-replay shadow-testing harness that catches breaking API changes before deploy.
- Orbit** — lightweight container orchestration platform.
