

350+ REST endpoints 600+ models · Balanzify SaaS backend	<300 ms p95 at ~1,000 req/min Load-tested production API	500+ concurrent WebSockets Real-time chat & notifications	392 Vitest test files in CI GoStyle · 114-table schema	Round 2 Meta Hacker Cup 2025 Competitive programming	PyPI · npm Open-source packages agentvcr · Apache-2.0
--	---	--	--	--	--

SUMMARY

Ships products end to end — PostgreSQL schema and API design through to the React interface people actually use. Launched two multi-tenant SaaS platforms (Django, NestJS), real-time apps over WebSockets and Socket.IO, and React/Vite developer tools published on PyPI and npm; owns data model, API contract, async workers, UI and CI/CD for every feature.

EXPERIENCE

Software Engineer · JumaTechs2026 – PRESENT

- Design and build scalable backend services and microservices for production web apps; ship secure, well-documented REST APIs consumed by web clients and internal systems.
- Optimise PostgreSQL schemas and queries, add Redis caching and async task processing to lift response times and throughput; ship on schedule in a cross-functional Agile team.

Software Engineer · Code Prophet2024 – 2026

- Designed and delivered microservices focused on performance, scalability and reliability; built and maintained REST APIs and services consumed by frontend apps and internal tooling.
- Partnered with frontend and product teams to turn requirements into robust, well-tested services.

SELECTED PROJECTS

agentvcr · open-source “VCR” for AI agentsPyPI / npm · Apache-2.0

Python · FastAPI · httpx · SQLite · React / Vite

- Drop-in LLM proxy that records every LLM and tool call from any agent run (OpenAI/Anthropic-compatible: Groq, Gemini, OpenRouter, Ollama, vLLM) with one base_url change and zero SDK integration, then replays runs offline deterministically at zero token cost.
- Built the React + Vite UI: side-by-side run diffs and a mid-run editor for prompts, tool results and responses, backed by a semantic differ (LCS over step fingerprints) that filters noise and highlights the first divergence.
- Positional replay with request fingerprinting and warn/strict/live-on-miss policies, validated on LangGraph and OpenAI Agents SDK; run forking (fix a failing step, rerun from there), a CI-friendly agentvcr diff CLI and header redaction so secrets never reach disk.

GoStyle · multi-tenant SaaS platform for POS & bookingsbusiness.gostyle.uk

NestJS 11 · TypeScript · PostgreSQL · Docker Swarm · GitHub Actions · Vitest · Python gRPC

- 18 independently versioned NestJS libraries (auth, RBAC, audit, outbox, idempotency, loyalty, sales, bookings) composed into one host API, so new products reuse the platform and write only domain code.
- 114-table PostgreSQL schema (116 migrations) for POS/billing, FIFO inventory costing, bookings, RBAC and loyalty — money stored as integer fils to avoid floating-point drift, partial unique indexes for tenant-scoped constraints.
- Hexagonal + CQRS with dependency direction enforced at CI; transactional outbox for at-least-once events, encrypted per-tenant idempotency for safe retries, tenant isolation and RBAC with last-admin protection; ~392 Vitest test files run against a real PostgreSQL container, zero-downtime deploys, Grafana + Loki.

Balanzify · multi-tenant SaaS accounting platformbalanzify.com

Django · DRF · PostgreSQL · Redis · Celery · Channels · Docker · AWS (EC2, RDS, CodeDeploy)

- Architected the backend for invoicing, payroll, HRIS, inventory and journals: 40+ Django apps, 600+ models, 350+ REST endpoints across end-user, workspace, admin and public API surfaces, with row-level tenant isolation, RBAC, audit logging and full model history.
- Load-tested to ~1,000 req/min at <300 ms p95 and 500+ concurrent WebSocket connections on an async ASGI stack (Daphne); automated AWS pipeline (CodeBuild → CodeDeploy → EC2) with PostgreSQL on RDS.
- Real-time chat and notifications (Channels + Redis pub/sub); Celery workers for OCR, LLM categorisation and reports; LLM transaction categorisation (OpenAI/Groq), receipt OCR (GPT-4 Vision + Tesseract); Plaid, Stripe, Moov, TaxBandits; JWT, Google SSO, OTP/MFA; OpenAPI docs.

Playzone · real-time multiplayer game platform2024 – PRESENT

Next.js · TypeScript · Tailwind CSS · NestJS · Socket.IO · PostgreSQL · Docker

- Share a link and play classic games instantly, no signup — Next.js + Tailwind front end through NestJS microservices. Live state over Socket.IO with sub-second sync; reconnect and turn-state handling so a dropped connection never loses the match; game logic and matchmaking split into services with PostgreSQL-backed state.

SKILLS

FRONTEND

React, Next.js, TypeScript, Vite, Tailwind CSS, real-time UIs (Socket.IO / WebSockets), component architecture, state management

BACKEND

NestJS, Django / DRF, FastAPI, Spring Boot, REST, gRPC, WebSockets, OpenAPI / Swagger, Celery

LANGUAGES

TypeScript, JavaScript, Python, Go, Java, C++, SQL

ARCHITECTURE

Microservices, Hexagonal (Ports & Adapters), CQRS, Event-Driven, Transactional Outbox, Idempotency, Multi-Tenancy, DDD

DATA & MESSAGING

PostgreSQL, MySQL, MongoDB, Redis, SQLite, Elasticsearch, pgvector, query optimisation; Kafka, RabbitMQ, Redis pub/sub, Django Channels

CLOUD & DEVOPS

AWS (EC2, RDS, S3, CodeBuild, CodeDeploy), Docker, Docker Swarm, Kubernetes, GitHub Actions, zero-downtime deploys

AI / LLM

OpenAI, Anthropic, Groq APIs, tool calling, structured output, RAG & embeddings, LangGraph, vision OCR, evals, token-cost optimisation

AUTH & PAYMENTS

JWT, OAuth2 / Google SSO, OTP-MFA, RBAC, Stripe, Plaid, Moov, TaxBandits

TESTING & OPS

Vitest, pytest, integration tests against real DBs, ESLint boundary enforcement, Prometheus, Grafana, Loki, load testing

EDUCATION

B.Sc. in Computer Science

North Western University · Graduated 2025

ACHIEVEMENTS

- Meta Hacker Cup 2025 — qualified for Round 2
- Open-source packages published on PyPI and npm

MORE OPEN SOURCE

- Rhombus — reliable sync across PostgreSQL, Kafka, Redis and Elasticsearch without distributed transactions (transactional outbox). Go · Kafka · Redis · Elasticsearch · PostgreSQL
- University ERP — academic system (students, results, payroll, HR records) on React + Spring Boot / PostgreSQL, deployed via CI/CD.
- Twinflow — traffic-replay shadow-testing harness that catches breaking API changes before deploy.
- Orbit — lightweight container orchestration platform.
