SUMMARY

Software Engineer who builds production backends that stay correct under load, retries and multi-tenancy. Shipped a **multi-tenant SaaS accounting platform** (600+ models, 350+ endpoints, ~1,000 req/min at <300 ms p95), an **18-library hexagonal / CQRS NestJS platform** on a 114-table PostgreSQL schema, and open-source developer infrastructure in **Python and Go** — event-driven architecture, database design and CI/CD.

EXPERIENCE

Software Engineer · JumaTechs2026 – PRESENT

- Design and build scalable backend services and microservices powering production applications; ship secure, well-documented REST APIs consumed by web clients and internal systems.
- Optimize PostgreSQL schema design and queries and add Redis caching and asynchronous task processing to lift response times and throughput; ship on schedule in a cross-functional Agile team.

Software Engineer · Code Prophet2024 – 2026

- Designed and delivered microservices focused on performance, scalability and reliability; built and maintained REST APIs and backend services consumed by frontend apps and internal tooling.
- Partnered with frontend and product teams to turn requirements into robust, well-tested services.

SELECTED PROJECTS

agentvcr · open-source “VCR” for AI agentsPyPI / npm · Apache-2.0

Python · FastAPI · httpx · SQLite · React / Vite

- Drop-in **LLM proxy** that records every LLM and tool call from any agent run (OpenAI/Anthropic-compatible: Groq, Gemini, OpenRouter, vLLM) with one base_url change and no SDK work, then deterministically replays them offline at zero token cost.
- Positional replay with **request fingerprinting** (normalized hash of model/messages/tools) and warn/strict/live-on-miss policies — validated against LangGraph and the OpenAI Agents SDK, flagging nondeterministic fan-out as diverged rather than replaying wrong results.
- Run forking and mid-run editing** via tape-replay-then-live-fallthrough; semantic run differ (LCS over step fingerprints) behind an exit-code-driven agentvcr diff CLI and a React UI; header redaction keeps secrets off disk.

GoStyle · multi-tenant SaaS platform for POS & bookingsbusiness.gostyle.uk

NestJS · TypeScript · PostgreSQL · Docker Swarm · GitHub Actions · Vitest · gRPC

- Monorepo of **18 independently versioned NestJS libraries** (auth, RBAC, audit, outbox, idempotency, loyalty, sales) composed into one host API on **hexagonal architecture + CQRS**, with dependency direction enforced at CI time via eslint-plugin-boundaries.
- Designed a **114-table PostgreSQL schema (116 migrations)** for POS/billing, FIFO inventory, bookings, RBAC and loyalty — money as integer fils (no float drift) and partial unique indexes per tenant.
- Transactional outbox** for at-least-once delivery and encrypted per-tenant **idempotency** for safe retries; ~392 Vitest files against a real PostgreSQL container in CI, zero-downtime deploys, Grafana + Loki.

Balanzify · multi-tenant SaaS accounting platformbalanzify.com

Django · DRF · PostgreSQL · Redis · Celery · Channels · Docker · AWS (EC2, RDS, S3)

- Architected the Django backend for invoicing, payroll, HRIS, inventory and journals: **40+ Django apps, 600+ models, 350+ DRF endpoints** across end-user, workspace, admin and public API surfaces, with JWT auth, Google OAuth2 SSO, OTP/MFA, RBAC, row-level tenant isolation and Swagger docs.
- On an async ASGI stack (Daphne) via automated AWS CI/CD (CodeBuild → CodeDeploy → EC2) with PostgreSQL on RDS; load-tested to **~1,000 req/min at <300 ms p95** and **500+ concurrent WebSockets**.
- Celery + Redis** workers for receipt OCR (GPT-4 Vision + Tesseract), LLM categorization (OpenAI/Groq), reports and webhooks; real-time chat over Channels + Redis pub/sub; **Plaid, Stripe, Moov** and **TaxBandits** (IRS 940/941) integrations.

Rhombus · distributed event orchestration platformOPEN SOURCE

Go · Kafka · Redis · Elasticsearch · PostgreSQL

- Reliable data sync across PostgreSQL, Kafka, Redis and Elasticsearch **without distributed transactions** — Transactional Outbox for atomic writes + event publication, eliminating downstream drift.

SKILLS

LANGUAGES

Python, TypeScript, Go, Java, JavaScript, C++ , SQL

BACKEND

Django / DRF, NestJS, FastAPI, Spring Boot, REST, gRPC, WebSockets, OpenAPI / Swagger

ARCHITECTURE

Microservices, Hexagonal (Ports & Adapters), CQRS, Event-Driven, Transactional Outbox, Idempotency, Multi-Tenancy, DDD

DATA

PostgreSQL, MySQL, MongoDB, Redis, SQLite, Elasticsearch, pgvector, schema design & query optimization

MESSAGING

Kafka, RabbitMQ, Celery, Redis pub/sub, Django Channels, Socket.IO

CLOUD & DEVOPS

AWS (EC2, RDS, S3, CodeBuild, CodeDeploy), Docker, Docker Swarm, Kubernetes, GitHub Actions, CI/CD, zero-downtime deploys

AI / LLM

OpenAI · Anthropic · Groq APIs, tool / function calling, structured output, RAG & embeddings, LangGraph, vision OCR

OBSERVABILITY & TESTING

Prometheus, Grafana, Loki, structured logging, SLI/SLO, load testing; pytest, Vitest, integration tests against real DBs

INTEGRATIONS & AUTH

Stripe, Plaid, Moov, TaxBandits, OAuth2 / JWT / OTP-MFA

FRONTEND

React, Next.js, Vite, Tailwind CSS

EDUCATION

B.Sc. in Computer Science

North Western University · Graduated 2025

ACHIEVEMENTS

- Meta Hacker Cup 2025** — qualified for Round 2
- Open-source packages** published on PyPI and npm

MORE OPEN SOURCE

- Twinflow** — traffic-replay shadow-testing harness that catches breaking API changes and regressions pre-deploy.
- Orbit** — lightweight container orchestration platform.
- Playzone** — real-time multiplayer game platform; NestJS microservices with Socket.IO sub-second sync, Next.js frontend.
NestJS · Socket.IO · PostgreSQL
- University ERP** — Spring Boot / React academic system (students, results, payroll) with CI/CD deployment.
