

Saad Islam Omy

SOFTWARE ENGINEER · GO & DISTRIBUTED SYSTEMS · AI-NATIVE DEVELOPMENT

omysaadislam@gmail.com | +880 1881 840496 | Dhaka, Bangladesh | github.com/Saad7890-web | leetcode.com/u/saadislam08

CORE SKILLS

Go

Production microservice + 3 OSS systems.
Goroutines & channels, context propagation, interfaces, idiomatic errors, table-driven tests, concurrent worker pipelines, REST & gRPC.

AI-Native SDLC

Daily coding agents (Claude Code); author of agentvcr (PyPI/npm); LangGraph & OpenAI Agents SDK; tool/function calling, structured output, streaming; reviewing agent-generated code.

LLM in Production

OpenAI · Anthropic · Groq APIs, classification, vision OCR pipelines, RAG & embeddings, pgvector, evaluation, token/cost control.

Distributed Systems

Microservices, service boundaries & API design, transactional outbox, idempotency, event-driven architecture, retries, eventual consistency, CQRS, hexagonal architecture.

Frontend

React, TypeScript, Next.js, Vite, Tailwind CSS, hooks & component architecture, real-time UIs over WebSockets/Socket.IO.

Data & Messaging

PostgreSQL, Redis, MongoDB, Elasticsearch, SQLite · Kafka, RabbitMQ, Celery, Redis pub/sub.

Cloud & DevOps

AWS (EC2, RDS, S3, CodeBuild/CodeDeploy), Docker, Docker Swarm, Kubernetes, GitHub Actions CI/CD, zero-downtime deploys, Prometheus/Grafana/Loki.

Languages & Frameworks

TypeScript/JS, Python, Java, C++, SQL, Bash · NestJS, Django/DRF, FastAPI, Spring Boot.

EDUCATION

B.Sc. in Computer Science

North Western University
Graduated 2025

ACHIEVEMENTS

Meta Hacker Cup 2025 — qualified for Round 2; algorithmic problem-solving under time pressure.

Open-Source Author — developer tooling published on PyPI and npm (agentvcr).

WORKING STYLE

Fluent spoken & written English, comfortable on live client calls. Ownership from unclear problem statement through production. Architecture discussion & code review in Agile, cross-functional teams.

SUMMARY

Engineer who writes **Go in production** and ships full-stack products around it. Built and shipped **GoStyle Network** — a Go microservice inside a commercial multi-tenant SaaS platform — plus three Go systems in the open: **Rhombus** (event orchestration across Postgres/Kafka/Redis/Elasticsearch without distributed transactions), **Orbit** (container orchestration), and **Twinflow** (traffic-replay shadow testing). Alongside Go, delivers microservice platforms in TypeScript and Python with React/TypeScript frontends. AI-assisted development is how I already work — coding agents daily, LLM features in production, and **agentvcr**, an open-source record/replay proxy that makes agent runs deterministic and catches silent divergence.

EXPERIENCE

Software Engineer · JumaTechs

2026 – Present

- Take backend services and microservices from problem statement through production and own them afterwards — designing service boundaries and APIs, then supporting them live.
- Use AI coding agents as part of the daily workflow, reviewing and verifying output rather than shipping it unchecked.
- Optimize PostgreSQL schema/queries, introduce Redis caching and async processing to raise throughput; maintain CI/CD and containerized deployments.

Software Engineer · Code Prophet

2024 – 2026

- Designed and delivered microservices focused on performance, scalability, and reliability; supported them after release.
- Built and maintained REST APIs consumed by frontend applications and internal tooling, turning unclear requirements into well-tested services.

PROJECTS

GoStyle Network — Go Microservice in Production SaaS

business.gostyle.uk

Go · PostgreSQL · Docker Swarm · GitHub Actions · Grafana · Loki

- Independently deployable microservice with its own API boundary — Go service and the wider TypeScript/ NestJS platform interoperate across a defined contract, not a shared codebase.
- Shipped into the production envelope: Docker Swarm, GitHub Actions CI, Grafana + Loki observability across service boundaries.

Rhombus — Distributed Event Orchestration Platform

open source

Go · Kafka · Redis · Elasticsearch · PostgreSQL

- Guarantees reliable data sync across Postgres, Kafka, Redis, and Elasticsearch without distributed transactions, via the Transactional Outbox Pattern for atomic writes + event publication.
- Delivery path built around at-least-once semantics, concurrent consumers, retry/partial-failure handling, and eventual consistency.

agentvcr — Open-Source "VCR" for AI Agents

PyPI / npm · Apache-2.0

Python · FastAPI · httpx · SQLite · React · TypeScript · Vite

- Drop-in LLM proxy that records every LLM/tool call from any agent run with a single base_url change, then deterministically replays runs offline at zero token cost.
- Positional replay with request fingerprinting flags nondeterministic fan-out as diverged rather than silently replaying wrong results; React diff UI + mid-run editor for the "fix and rerun" loop.

GoStyle-Microservice — Multi-Tenant SaaS (POS / Bookings)

business.gostyle.uk

NestJS 11 · TypeScript · Go · PostgreSQL · gRPC · Docker Swarm

- 18 independently-versioned libraries composed into a host API; transactional outbox + idempotency interceptor so a retried POST can't double-charge or double-book.
- 114-table PostgreSQL schema (116 migrations), hexagonal architecture + CQRS enforced at CI time, ~392 test files, zero-downtime deploys.

Balanzify — SaaS Platform with Production LLM Features

balanzify.com

Django 5 · DRF · PostgreSQL · Redis · Celery · AWS

- Shipped LLM features to production: transaction categorization (OpenAI/Groq) and a receipt-OCR pipeline (GPT-4 Vision + Tesseract/OpenCV) removing manual data entry.
- 40+ modular apps, 600+ models, 350+ REST endpoints; load-tested to ~1,000 req/min at <300ms p95 and 500+ concurrent WebSocket connections.

Also shipped: Playzone — real-time multiplayer platform (Next.js + NestJS + Socket.IO, sub-second game-state sync) · Orbit — lightweight Go container orchestrator · Twinflow — Go traffic-replay shadow-testing harness for catching breaking API changes pre-deploy.
